

Sunway Construction Career Talk

Sunway Managerial Advancement for Recruited Talents (SMART) Programme

Press release

University of Nottingham Malaysia Campus, 12 March 2014 — Six members of the highly regarded Sunway Construction visited the University of Nottingham Malaysia Campus to entice the next generation of civil engineers to apply for their SMART career development program.

Three speakers took to the stand to explain their own fields, and detail their experiences of working at Sunway; Mr. Clayton Tan, Head of HR, Daryl Wong, Head of Department for Recruitment & Learning, and Mr. Foo Kar Kien, a SMART Executive.

Mr. Clayton Tan was the first on stage and made his impression by explaining Sunway's larger and most impressive projects, such as Sunway Lagoon, Legoland, and the up-and-coming BRT (bus rapid transit) system. It is safe to say that the audience was hugely impressed with the size of Sunway's current developments and the scope of their future projects, and a large number of UNMC applications are expected.

Mr. Foo Kar Kien, however, was the star of the show. He talked through the entire process of Sunway's SMART program, and detailed where candidates often fall down or could improve. Special focus was put on the diversity of paths and options for those who are taken on in the SMART program, and how they could alter their career path into the line of project management as they became more senior.

Overall it was a highly interesting talk, and many students came to the front at the end to ask questions to the speakers. Sunway Construction has certainly encouraged young undergraduates to apply to the SMART scheme, and work their way up into the company's ranks.

About UNMC ICE SC

ICE – Institution of Civil Engineers – Student Chapter is a professional student body that encompasses the student academics and future career. We act as a bridging connection between the school and the external world of civil engineering. For more information, please visit www.facebook.com/unmcice.
