

Why I joined Galliford Try as a Temporary Works Designer

Temporary Works (TW) are engineered solutions designed to support, protect, or provide access to structures during construction or demolition, as well as to maintain stability and control throughout the works. They can include items like formwork for concrete, excavation supports, structural propping, access scaffolding, and site hoardings. TW are essential for ensuring safety and efficiency in construction projects and can be either removed or left in place after the completion of the permanent works.

Strong route to Chartership

"Being involved with Temporary Works has accelerated my ICE Chartership by giving me early responsibility, safety-critical decision-making, and

exposure to live construction risk, strengthening my judgement, constructability skills, and collaboration with site teams." *Ash Kiani.*

Technical development

"From the start, I was supported and challenged with early design responsibility on live projects, developing analysis and design skills while learning from a

close-knit, highly experienced team whose mentorship has driven my growth." *Sakina Rezaei.*

Design and site experience

"Temporary Works combines problem-solving and collaboration. Site visits at Galliford Try strengthen my teamwork and clarify deliverables. Seeing

Temporary Works realised on site is truly rewarding." *Brent March.*

Real responsibility fast

"Galliford Try gave me responsibility from day one, trusting me on live projects that quickly built my learning and confidence. Making an early impact is why I joined

Temporary Works." *Omar Tawfiq.*
