

## Constructability Award 2021

### Manchester Metropolitan University Arts & Humanities Building

Manchester Metropolitan University, Morgan Sindall, Arup, Allies and Morrison

A clever integration of a new purpose-built facility with a heritage building.

Close collaboration between the stakeholders, coupled with effective use of design, helped to solve problems that then became permanent solutions.

The focus on the selection of materials to limit carbon throughout the whole life of the building was also impressive.

The competition was stiff in this category with two commendations going to:

- **Replacement Pooley Bridge, Cumbria**

Cumbria County Council, Knight Architects, Eric Wright Civil Engineering, GHD, WEC

Highly commended for its excellent approach, fully embedding temporary works activity into the programme, in a way that extends over and above the norm.

- **Leeds Liverpool Canal Bridge Renewal FHR5/16**

Network Rail, Arcadis, J Murphy & Sons

Highly commended by the judges for the way that tricky issues were managed - in particular, dealing with the difficult access to the construction location.

#### Also nominated:

- **Keswick Multi-User Bridges, Cumbria**

Lake District National Park, A L Daines, Cubby Construction, Beaver Bridges

- **Manchester Metrolink - Trafford Park Line**

Transport for Greater Manchester, AECOM, MPT
