Established in 1818 in London, the Institution of Civil Engineers (ICE) is the first professional engineering body in the world. Since obtaining its Royal Charter in 1828, it has expanded considerably and now has more than 95,000 members across the world.

Speaker's Biography

Jason has over 25 years of geotechnical experience from research and consultancy through to specialist subcontracting works. He has experience in piling, shoring and basement construction as well as highways and infrastructure. However, his love and specialism has been the use of soil improvement, from a technical, environmental and commercial perspective, he finds it much more enjoyable than digging holes and filling them with concrete or steel! He has worked for the Transport Research Laboratory (TRL), Roughton International, Roger Bullivant Ltd, Soletanche Bachy, Menard and is now the worldwide director for Soil Improvement with Bauer Spezialtiefbau GMBH
