Join ICE Ontario and RICS for a tour of Sheridan College and their award-winning district energy systems.

Efficient building design, district energy infrastructure, promoting green transportation, and facilitating meaningful engagement with community wellness projects are among the efforts that have made Sheridan an institutional model for how a 21st-century organization embraces sustainability.

Sheridan's strategic energy management journey began in 2012 with 16 months of planning by a team that included operational staff, faculty members, and students, mentored by a partner with global reach and expertise. The Integrated Energy and Climate Master Plan has served as the blueprint for a decade of capital investment in efficient buildings and infrastructure.

Join us on September 13 and immerse yourself in the world of sustainability at Sheridan. You'll have the unique opportunity to learn, observe, ask questions, and engage with our comprehensive energy and greenhouse gas reduction solutions. From campus-wide control and metering replacement to building envelope upgrades and retrofits, award-winning district energy systems, and improved heating and cooling equipment, you'll see our innovative initiatives firsthand. Our team members will be there to share their experiences with on-site combined heat and power generation, new buildings that meet the highest global benchmarks, and groundbreaking energy and climate planning in nearby communities.

Please visit our [ICE Ontario website](#) and [Subscribe](#) to our mailing list to learn about latest events, ICE activity in Ontario and other information.
